

Dear Shouwu,

May 14, 1998

Thanks for inviting me to Columbia, and describing your paper on Shimura curves. That is a beautiful piece of work! \*

I am enclosing some reprints - where I also thought about multiplicity one questions - and a preprint on Algebraic modular forms.

Best wishes,

Dick

\* Make sure it is free of typos, which mar the beauty. For example, the crucial formula at the bottom of page 4 for the Fourier coefficients of  $\Psi$  does not make sense (to me).
